

# Exam Cell

## Introduction:

According to Harris & Hodges, 1995 “Assessment is a process of gathering data to better understand the strength and weaknesses of student learning”. Assessment is an important element in teaching-learning process. It is important for tracking the progress of students, to make planning of next steps and increasing involvement of all stakeholders. It helps teachers, students and parents and other stakeholders to understand the breadth and depth of teaching and learning process. It is needful to examine the strength and weaknesses of the students and to make proper planning in future. It works as a roadmap and with the help of this teacher can identify the objectives are fulfilled or not among the students. Assessment is a continuous process. The assessment of student learning is important because it provides useful feedback to both teacher and students. The previous process of assessment is depends upon only university examination (Written Examination). It will be more effective and fruitful for students, if the internal assessment procedure should include along with theory examination. So, the institute has observed this need and implemented own designed CIA Notebook for all the programmes which had a favorable impact on quality enhancement.

## Title: Continuous Assessment is Key to Success:

Continuous assessment is an ongoing process. It gathers and interprets the information about learning process of students. It uses to understand the progress of students and helps to make decision to both student and teacher.
